

Ironvale Group — where the operation leaks time and money

email + system of record connected **read-only** · findings from the last **30 days** · as of Jul 20, 2026

FOUND LEAKING, ANNUALIZED

≈\$318,768 / year

\$26,564 of operational leak found at risk in the last 30 days — 1,044 priced instances across 9 automated checks. Every instance traces to the email thread behind it.

These figures price **ops time only** — minutes at an hourly rate, not what a miss costs the business. When the step that slips is the one that bills or closes, the real exposure is a multiple of every number on this page: multiply the **681** above by what a typical one is worth to you.

WHERE IT LEAKS

Inbound P2P Transfer Processing	MISSED FOLLOW-UPS	681 inventories
the "New Barlow Invoice" email never went out		\$9,078
Coil Receiving & Splitting	EXCESS BACK-AND-FORTH	61 orders
far more emails per order than the peer norm		\$6,413
Purchase Order Fulfillment	EXCESS BACK-AND-FORTH	32 orders
far more emails per order than the peer norm		\$4,833
Everything else the audit flagged		270 instances
6 further checks, detailed in the live view		\$6,239

9 exception checks evaluated against Ironvale Group's own workflows · dollar figures carry their assumptions (see "How we compute this")

681 inventories never got the “New Barlow Invoice” email after Received — usually out within ~26h

The “New Barlow Invoice” email never went out — 681 inventories in the window, priced at **\$9,078**. (assumes ~20 min of ops time per item at \$40/hr — an estimate you can adjust.)

Inventory 12286 trigger Jun 22, 2026 → never sent — **28 days** and counting

“RE: .014 steel quote for Lakemont Partners”

Inventory 12275 trigger Jun 22, 2026 → never sent — **28 days** and counting

“Invoice #1533, #1525, #1514, #1513, and #1512 from Crestway Materials”

Inventory 12334 trigger Jun 23, 2026 → never sent — **27 days** and counting “FWF INVOICES ”

Invoice #1533, #1525, #1514, #1513, and #1512 from Crestway Materials

Taylor Whitaker (Crestway Materials) · Jul 1, 2026

Hello! Please respond to this email if you did not receive, are unable to open, or have any questions about the attached invoice(s). The following invoices are attached: – Invoice #1533 (2026-06-26) – Invoice #1525 (2026-06-26) – Invoice #1514...

NEW Barlow Invoice LMP-00502

Rowan Verlaine · Jun 27, 2026

Hello, Attached is an invoice for load LMP-00502. Please let us know if you have any questions. Thank you, Alex Marlow Ironvale Group...

Barlow Releases

Skyler Barlow · Jun 23, 2026

Hey Langley, Please release the attached 3 loads for Crestway Materials to pickup. Let me know if you need anything else. Thanks, Clearwater Industrial...

Three of the 620 email threads behind this number. Every figure in this report clicks down to the actual thread — you can check our work, and when we're wrong, the audit gets smarter.

THE RHYTHM, DRAWN — 1,610 INVENTORIES IN SCOPE

THE NUMBERS THAT SURPRISED US

42%

of inventories in scope slipped

681 of 1,610

98

emails on a single order

the peer norm is ~15

229

orders sitting quiet right now

partway through, no activity

26h → 49h

follow-up time, median → slowest 10%

measured from their own history

61 orders in Coil Receiving & Splitting took far more back-and-forth than the rest — the usual is ~5 emails per order

61 orders · est. **\$6,413** in the window — assumes ~10 min per extra email touch at \$40/hr — an estimate you can adjust

32 orders in Purchase Order Fulfillment took far more back-and-forth than the rest — the usual is ~4 emails per order

32 orders · est. **\$4,833** in the window — assumes ~10 min per extra email touch at \$40/hr — an estimate you can adjust

The audit flagged 6 further checks beyond these — 270 more instances, est. \$6,239 — detailed in the live view.

WHAT TURNS ON AFTER THE AUDIT

- FIRST** **Alerts.** The moment an inventory slips its usual rhythm, the right person knows — while it's in flight, not in a month-end review. *Your team approves every step.*
- THEN** **Drafted replies.** The follow-up that never went out arrives pre-written, built from how your team actually writes it. A person reads it and clicks send. *Your team approves every step.*
- LATER** **Automation.** Steps that prove themselves in dry runs graduate to running on their own — each with an audit trail back to the evidence. *Your team approves every step.*

The audit is the front door. From there, pariter grows into a 24/7 member of your ops team — catching what slips, drafting what's due, escalating what's stuck, and QA'ing its own work.

HOW WE COMPUTE THIS

- On Ironvale Group's own **held-out history**, our model predicted the team's next action **94 times out of 100** — always guessing the most common action scores 85. The test re-runs on every retrain; ask to see it live.
- The checks are derived from **how Ironvale Group actually works** — we read the email and system history (read-only), reconstruct the real workflows, and watch where they slip. 9 exception checks ran; 9 found leaks.
- Every dollar figure is **instances × minutes × an hourly rate**, with the assumption printed beside it — an estimate you can adjust, not a black box.
- Response-time claims are **medians measured from Ironvale Group's own history**, and the engine is backtested against held-out history before it makes a claim. Your technical skeptic can verify every number.
- Annualized figure: open exposure found in the last 30 days (\$26,564) read as a monthly run-rate × 12.

See it live on a company like yours — 15 minutes

A working audit on a real (anonymized) business: every number on this page, live, clicking down to the emails behind it. Then decide if you want yours.
